

## Customer Artwork Requirements For Screen Printing

We view and process artwork with *Adobe Illustrator CS5*. In order to provide you the **best quality** and **fastest turn-around** we ask that you submit artwork to us using the following guidelines:

- All artwork files must be created with vector graphics to be compatible with Adobe Illustrator CS5. Acceptable file types include AI, EPS, and (vector) PDF.
- All fonts should be converted to paths or outlines.
- Bitmap/Raster graphics with RGB colors *are not compatible* with Adobe Illustrator. (Bitmap graphics are created with pixels or digitally scanned images)
- Artwork indicated to be “100% scale” should refer to the exact size needed to print.
- Any part of the artwork smaller than four thousandths of an inch (4mills or .004) is near the limits of screen printing capabilities.
- Fine details and serifs on fonts might only partially print or fade away completely.

*If you are unable to meet our artwork requirements, our in house graphic artist can provide assistance for an additional charge. Simply provide what artwork you have and what you want changed / added and we'll provide you an estimated cost.*
